High-Frequency Ultrasonic Transducer

Applications

- River, harbor, and estuary survey

Features

- Broadband with low Q of 2
- Minimal sidelobes for concentrated energy on target providing excellent definition
- Internal transformer provides impedance match to echosounder and allows use of longer cable
- 500 W RMS, power rating is at 2% duty cycle
- Do not strike or use solvents (especially acetone) on the transducer face. Use water-base anti-fouling paint only. Do not cut transducer cable.
- Seamless, SEALCAST™, urethane housing resists cuts and abrasion and has excellent, impact resistance

Options

- Impedance to customer's specifications using matching transformer
